1. Introduction

1.1 Background

The Department of Defense (DoD) Computer-aided Acquisition and Logistics Support (CALS) Test Network (CTN) is conducting tests of the military standard for the Automated Interchange of Technical Information, MIL-STD-1840A, and its companion suite of military specifications. The CTN is a DoD sponsored confederation of voluntary participants from industry and government managed by the Electronic Systems Center (ESC).

The primary objective of the CTN is to evaluate the effectiveness of the CALS standards for technical data interchange and to demonstrate the technical capabilities and operational suitability of those standards. Two general categories of tests are performed to evaluate the standards; formal and informal.

Formal tests are large and comprehensive, which follow a written test plan, require specific authorization from the DoD, and may take months to prepare, execute, and report.

Informal tests are quick and short, used by the CTN technical staff, to broaden the testing base. They include representative samples of the many systems and applications used by CTN participants. They also allow the CTN staff to gain feedback from many industry and government interpretations of the standards, to increase the base of participation in the CALS initiative, and respond to the many requests for help that come from participants. Participants take part voluntarily, benefit by receiving an evaluation of their latest implementation (interpretation) of the standards, interact with the CTN technical staff, gain experience using the standards, and develop increased confidence in them. The results of informal tests are reported in Quick Short Test Reports (QSTRs) that briefly summarize the standard(s) tested, the hardware and software used, the nature of the test, and the results.

1.2 Purpose

The purpose of the informal test, reported in this QSTR, was to analyze Texas Instruments' interpretation and use of the CALS Standards in transferring Computer Graphics Metafile data. Texas Instruments used its CALS Technical Data Interchange System to produce data, in accordance with the standards, and delivered it to the CTN technical staff on a 9-track magnetic tape.

2. Test Parameters

Test Plan: AFCTB 92-063

Date of
Evaluation: 5 October 1992

Evaluator: George Elwood
Air Force CALS Test Bed

Inset Systems HiJaak v2.02

Xerox Ventura Publisher

Standards

Tested:

MIL-STD-1840A

MIL-D-28003

3. 1840A Analysis

3.1 External Packaging

The tape arrived at the Air Force CALS Test Bed (AFCTB) enclosed in a box in accordance with ASTM D 3951. The exterior of the box was marked with the magnetic tape warning label, as required by MIL-STD1840A, para. 5.3.1.3.

The tape was enclosed in a barrier bag as required by MIL-STD-1840A, para. 5.3.1.2. Inspection of the tape reel showed the label indicating the recording density as required by MIL-STD-1840A, para. 5.3.1. Enclosed in the box was a packing list showing all files that were recorded on the tape.

3.2 Transmission Envelope

The 9-track tape received by the AFCTB contained MIL-STD-1840A files. The files were named per the standard conventions.

3.2.1 Tape Formats

The 1840A tape was run through the CTN *Tapetool* v1.2.8 utility. No errors were encountered while evaluating the contents of the tape labels.

3.2.2 Declaration and Header Fields

No errors were reported in the Document Declaration file or data file headers.

4. IGES Analysis

No Initial Graphics Exchange Specification (IGES) files were included on this tape.

5. SGML Analysis

No Standard Generalized Markup Language (SGML) files were included on this tape.

6. Raster Analysis

No Raster files were included on this tape.

7. CGM Analysis

The tape contained six (6) CGM files to be evaluated per the CALS MIL-D-28003 specification. None of the files were found to meet the current CALS specification; several did not meet the basic CGM standard.

The error log from the ATC *MetaCHECK* and the CTN *validcgm* are included in the appendix of this report.

All files were viewed, with varied results, using ATC's *MetaVIEW*. Files D001C001, 002, and 003 were displayed with reported errors.

The files were converted using ArborText's *cgm2draw* utility. All files converted without a reported error. The resulting files were imported into Island Graphics' *IslandDraw*. File C001 displayed and printed without a problem. File C002 did not display or print correctly. Part of the image was rotated 180 degrees, and the text along the bottom of the image printed across two pages. File C003 displayed correctly, but the text along the bottom of the image printed over two pages. File C004 displayed and printed correctly after the background was removed. File C005 displayed and printed without a problem. File C006 displayed and printed with heavy lines.

The files were printed using ATC's *CGM-View* software on the Sun 3/60. File C001 printed correctly. File C002 appeared to be missing some lines. Files C003, C004 and C005 appeared to be correct. File C006 printed with heavy lines and would be unusable.

The files were imported into SPC's *Harvard Graphics 3.05*. File C001 would be unusable because of the lack of definition in the pie charts. File C002 printed as dark shapes.

File C003 appeared to be correct. File C004 printed as a dark shape. File C005 appeared to be correct. File C006 printed as heavy dark lines that were unacceptable.

The files were imported directly into Island Graphics' *IslandDraw*. Files C001-C005 appeared to be correct after the background was removed. File C006 displayed and printed as white on black. Removing the background made the image disappear. Other than the color, the image was correct.

The files were imported into the Xerox *Ventura Publisher*. All files with the exception of C002 appeared to be complete and correct. Several lines appear to be missing from file C002.

Because of the reported errors by ATC's *MetaCHECK* and CTN's *validcgm*, the files do not meet the CALS MIL-D-28003 specification.

8. Conclusions and Recommendations

In summary, the MIL-STD-1840A tape structure from Texas Instruments was correct. No errors were reported by either tape reading utility.

The CGM files were evaluated with a range of tools. The two parsers available in the AFCTB reported the files as not meeting the CALS MIL-D-28003 specification. Some of the files were reported as not meeting basic CGM standard.

The CGM files contained on this tape do not meet the CALS MIL-STD-1840A requirements.

BEGIN METAFILE string : "cgmblackf15smsh.dwg"

METAFILE DESCRIPTION : "Intercap CGM version 1.10 RWC
0.000000,0.000000,11.000000,8.500000 Page
11.000000,8.500000 Environment ENGLISH ***
MIL-D-28003/BASIC-1"

Picture 1 starts at octet offset 312; string contains: "BIN 1"

Application data elements encountered in CGM

Conformance Summary : This file conforms to the CGM specification.

This file meets the CALS CGM Profile (MIL-D-28003).

Summary of Testing Performed and Errors Found:

1 Pictures Tested
791 Elements Tested
54296 Octets Tested
